

**TopsWorks 2016 SP0 | What's new**

Release: 26.11.2015

This release includes several improvements and bug fixes:

| <b>DPS-<br/>SPR #</b> | <b>Typ</b> | <b>Beschreibung</b>   |
|-----------------------|------------|---|
| 2342                  | FR         | Posibility to delete rolling direction                                  |
| 2334                  | FR         | Show letter (D) and (A) in bend list                                    |
| 2366                  | FR         | New type of contour „vaporize“  |
| 2363                  | FR         | Warning, if library feature is not suppressed in Tops configuration     |
| 2386                  | FR         | API method to update bend table   |
| 2385                  | FR         | API method to insert bend parameters                                    |
| 2384                  | FR         | API method to update bend parameters                                    |
| 2040                  | FR         | Unique identification of bends on flat pattern view an bend table       |
| 0106                  | FR         | Better performance for parts with lots of open contours                 |
| 0934                  | FR         | API method to insert bend parameters (duplicate to 2385)                |
| 1056                  | FR         | Enhancement in workflow for definition of open contours                 |
| 1060                  | FR         | Takeover of SOLIDWORKS material at insert bend parameters               |
| 2299                  | BUG        | TopsWorks hangs during „insert bend parameter“ with specific part       |
| 2380                  | BUG        | Sketch wrong in GEO file  |
| 2364                  | BUG        | Open contours: export of wrong circle segment                           |
| 2374                  | BUG        | No generation of attributes (ToPs4), if part has old attributes (ToPs3) |

FR = Feature Request
